Certus Cybersecurity

Certus Cybersecurity Consulting Services

Leverage our cybersecurity expertise to protect your company from data breach and disruption. Strengthen key capabilities and maintain compliance with Certus Cybersecurity's expert testing, consulting and compliance services

Key Benefits

The difference between successful containment and a major intrusion is largely a function of speed, your organization's preparedness and the consistency of enterprise risk mitigation efforts – take action now

Cybersecurity Consulting Services

Led by former Visa cybersecurity experts, Certus Cybersecurity's team of highly qualified consultants are trusted security advisors with extensive experience protecting organizations from data breach and disruption. Certus Cybersecurity's consulting services portfolio is designed to help your organization advance to an optimized, intelligence-driven security posture so that you can effectively manage risk and stay ahead of evolving attack patterns.

Our focus is providing expert services and actionable approaches to your most pressing security challenges, coordinated across security disciplines and tailored to your technology environment. We support every client relationship with the latest security technologies and best practice, a holistic approach to security and a sharp focus on the risks that matter most. As a result, we are well positioned to comprehensively assess your organization's risk posture and rapidly achieve measurable improvements in capability.

Payment Card Industry (PCI) Compliance Services

As a PCI Qualified Security Assessor (QSA), Certus Cybersecurity conducts PCI assessments, PCI readiness assessments and periodic PCI Compliance Checks for numerous clients (Merchants, Service Providers and Processors) on an annual basis. Onsite assessments include interviews of key personnel, examination of policies, procedures and other key documents, architecture review and review of key device configurations. The result is a Report on Compliance and (where applicable) a PCI Attestation of Compliance document, which demonstrates the company's adherence to the PCI Data Security Standard. We perform PCI readiness assessments and create Remediation Roadmaps to assist you in fast-tracking your compliance efforts. Additionally, Certus Cybersecurity performs periodic PCI Compliance Checks to help ensure that you are addressing controls which have a history of slipping through the cracks.

Trusted advisors with specialized expertise to support your technology teams

Holistic assessment to enable strategic decision-making

Unrivalled client focus and continuous support

Prioritized, actionable insights to rapidly drive improvement in both information security maturity and compliance

Breadth and depth of experience across industries

Increase visibility into critical risks

Application Security Testing	Leverage our expertise in architectural risk assessment, source code review and penetration testing to gain confidence that your mobile applications, web applications and APIs are secure
Cybersecurity Program Maturity Assessment	Assess and benchmark the maturity of your enterprise cybersecurity program. Chart a course for improvement where necessary
Incident Response	Prepare for or respond to a cyber attack to prevent it from crippling your operations. Understand root cause and build cyber resiliency
Other Information Security Services	Certus Cybersecurity is an established leader in the area of information security. Clients turn to us for advice across security domains. Rely on us to solve your most pressing challenges related to incident response, security engineering, security architecture, identity and access management, vulnerability management, secure software development or governance, risk and compliance
PCI Compliance Services	Achieve compliance and prevent breaches impacting cardholder data. Led by ex-Visa cybersecurity experts, our team of Qualified Security Assessors provide Annual PCI Assessments, PCI Program Assessments and range of PCI-related services

Certus Management

What We Do

Certus Cybersecurity offers technical cybersecurity consulting and managed services, PCI compliance services, and strategic cyber security program services. We are adept at helping organizations identify weaknesses and mature their cybersecurity capabilities.

Who We Serve

Our clients range from large, multinational enterprises to emerging companies. Wherever you are and whatever your industry, Certus Cybersecurity can serve as an effective and trusted advisor to your business. We operate across the Americas, Europe, the Middle East, Africa and Asia Pacific, providing both onsite and remote services.

How We're Unique

Founded by former Visa cybersecurity experts, we possess unrivalled expertise in enterprise cybersecurity and PCI compliance. Our clients receive technical testing by elite, globally ranked security researchers and leverage our insights into the technologies and best practices deployed by the world's most mature cybersecurity organizations. Above all, we are known for our commitment to superior service and our clients' protection.
